

AQI Kai

The Rainbow office, on your phone. **Easy enough that it actually gets done.**

Built inside a working Rainbow office.

Designed in the field, in Colorado Springs, by a dealer who runs demos, service and a team every week. It isn't about saving minutes — it's about making the right thing easy enough that reps do it.

ONE LEAD,
START TO FINISH

Demo set + verified

01 Leads & OCR Intake

Snap the handwritten lead sheet in My Day. OCR reads the handwriting and fills the fields, a manager approves in one tap, and the lead lands in the pipeline with its photo attached.

WHY IT MATTERS No lead dies in a pocket. Nobody types.

02 Call Blocks & Active Calling

Leads grouped into blocks. Tap **Start Calling**: the lead card and sheet image come up, the script is on screen, the number is one tap — and one tap writes the follow-up text with the customer's name and details filled in. Hand a block to a teammate anytime.

WHY IT MATTERS Reps make the calls, because the calls are easy.

03 Appointments & Calendar

Set the demo right from the call. Every demo on one calendar — yours and your team's — with **verified / needs-verify** indicators and reminders like "verify tomorrow's demos."

WHY IT MATTERS Fewer no-shows. Nothing slips.

04 My Day + RAPID

Your whole day on one phone screen: plan, demo blocks, leads, calendar, scripts, pay, preferences. **RAPID** is the same power with fewer words.

WHY IT MATTERS One app, in the pocket they already carry.

05 Service Desk

Scan the serial and the customer auto-matches. Photos at intake and during service, a helper for basic diagnosis, a receipt built for you — then a text with an approval link the customer just taps.

WHY IT MATTERS Clarity for the customer, a clean record for you.

06 Digital Paperwork

Everything signed on the phone in the living room — or the customer signs later from an emailed link. Nothing to print, scan or lose.

WHY IT MATTERS No paper. No chasing signatures.

07 Inventory by Serial

Every unit tracked by its serial barcode from the day it arrives — scan it and it moves, assigns or sells.

WHY IT MATTERS You always know where every machine is.

08 Pay & Team Permissions

Pay tracks itself as demos and service are resulted. Each person sees their own work; a leader sees the team's.

WHY IT MATTERS No spreadsheets. No arguments.

09 Maps & Regi

Every household you've ever served, pinned on a map. The **regi map** records where you've been, when, and who you talked to.

WHY IT MATTERS Work territories on purpose, not from memory.

10 Customer Pages & QR

Unique QR codes on the shop box and the dealer's phone. Customers scan and land on the **Cost of a Clean Home** calculator, AI-search links that strengthen the demo, and their own referral program — every referral tracked.

WHY IT MATTERS Customers refer more, and you know who did.

11 InstyKai

A chatbot on your customer pages that actually books the demo — asks the questions, picks the time, sends the confirmation, puts it on the calendar.

WHY IT MATTERS Demos get set while you're in another living room.

12 Kai & Guru

PREVIEW · TESTING

Kai answers questions about your business — demos last week, who set them, what's due. **Guru** takes a demo recorded in My Day, transcribes every voice, and returns coaching with the attitude of a great trainer. (Yes, there's an arcade too.)

WHY IT MATTERS An analyst and a coach in every rep's pocket.

Buy the pieces you need.

Every module stands on its own. Start with leads and calling, or service, or the customer pages — add the rest when you're ready. Modular subscriptions: pay for what you use.

Want AI in your office?

Sean built this while running a Rainbow office and is available to consult — any office, anything AI: automation, assistants, the boring parts done for you.

aqikai.com

Ask for a demo of the demo software. Videos, a walkthrough on your phone, or a call.
